FOG CURTAINS

GENIUS LASER TECHNOLOGY

Fog curtains:

Fog curtains produce a wall of cascading fog which can be used as a projection surface. It can be used with laser and video projection as well as conventional lighting.

The fog curtain literally creates a projection surface out of thin air. Laser and video can simultaneously be projected on the fog curtain to produce spectacular walk in effects. The fog curtain can be used for special effects and presentations.

The fog curtain is dry to the touch and guest can walk straight through the screen without any hazardous effects.

The fog curtain comes in lengths of 2 Meter sections and can be combined with multiple units to produce any length required.

The fog curtain works best in low or no wind conditions.

The fog curtain requires tap water to run and has its own reservoir for short term use.

For permanent installations the fog curtain can be attached to a water source.
